

Freeze Guard

**From
EVS Water
Management
and Leak Detection**

**Freeze Guard from EVS – Protect your pipes from freezing.
Includes energy saving thermostat.**

EVS Freeze Guard frost protection cables are designed for water pipes during the winter to protect against freezing. A simple Solution where frost and freezing problems can result in high costs and disturbance to daily life.

EVS Freeze Guard is ready to plug in. At the end of the cable is a built in thermostat which switches on when the pipe temperature Drops below 5degC. This will prevent freezing and keeps the Energy consumption to a minimum. To work effectively, the entire pipe should be insulated with pipe insulation.

The system is easy to install. Simply fix the heating cable with pvc tape along one side of the pipe and plug in for a quick installation.

Depending on the pipe diameter and thickness of insulation, you can have a frost protection against -20degC. We refer to the technical installation manual for an exact overview of your desired pipe diameter and insulation.

Do not use on drains, fuel pipes or flexible fuel hoses.

EVS Freeze Guard

Up to 135mts of heating cable

Suitable for use on

- Plastic and metal (water) pipes inside and outside
- Outside taps
- Fire pipes
- Sprinkler pipes
- Pumps

Freeze Guard is available in fixed lengths from 2 – 135 mts to suit your requirements

	Length (m)	Power (W)
EVSFreeze2	2	20
EVSFreeze4	4	40
EVSFreeze8	8	80
EVSFreeze16	16	160
EVSFreeze30	30	300
EVSFreeze60	60	600
EVSFreeze135	135	1350
