- Complete with screw tap and hose connector tap
- Including Diverter
- Additional units can be linked using Linking Kit

Accessories extra to Water Butt kits include;

Rain diverter
 Linking kit
 Water Butt Tap
 Water Butt stand

Rainwater Harvesting and Home Composting

The **Kitchen Composter** allows 100% home composting to be achieved by tackling the elements of organic waste that cannot normally be put into a traditional home composter.

All food waste including meat, fish, dairy products and cooked foods can be returned into nutrient rich compost. This process does not produce smells or attract flies. The Kitchen Composter is an air-tight container which the food waste is placed in. *Bokashi* is added as a compost activator. This is a bran-based material that has been prepared with EM, a mixed culture of naturally occurring friendly microorganisms.

The food waste then ferments, allowing it to be safely composted. Liquid feed can be drained off during the fermentation process. This is alive with beneficial microbes and can be diluted as plant feed or poured down the drain to prevent algae build up and odours.

The **Kitchen Caddy** range is the ideal solution for collecting food waste in the kitchen. Material can then be either transferred into a home compost bin or put out for collection. Solid versions can be used with or without a compostable liner, whilst the vented versions have been specifically designed to be used in conjunction with Compost-a-Bag® 100% compostable liners. A caddy sits neatly on the kitchen worktop.

Clean and hygienic food waste collection

All caddies feature a wide landscape opening ensuring food waste goes into the caddy and not on the worktop. The close-fitting lid contains moisture and odours within the caddy. A convenient carry handle allows the caddy to be taken to the Kerbside Caddy or home composting bin for simple waste disposal.

The ideal food waste collection system

Used in conjunction with the market-leading Kerbside Caddy, the Kitchen Caddy forms part of a proven solution for the effective handling of source-separated food waste.

Composter Converter

The Composter Converters are strong, simple and rigid in construction, need no assembly and are easy to use. An extra wide hatch allows for easy removal of finished compost.

Made from recycled plastic, the Converters are available in two sizes, the Compact 220 litre and the Giant 330 litre.

Windproof lid to stop the contents blowing away, extra wide hatch to allow the removal of the finished compost, The unit is delivered requiring no assembly, made from recycled plastic, the Composter Converter is strong and rigid in construction, Guaranteed for 10 years
